

2010 had a good start at Treotech, home of the most innovative power monitoring digital systems.

The Treotech products have been awarded with the CE mark. This means that the Treotech products can now be exported to the European Community, worldwide recognized for the high level of demand concerning the quality of foreign goods. The entire Treotech line will receive the label, starting with the TM1 and TM2 - oil temperature monitors and windings, AVR - voltage regulator relay, BM - monitor plugs and MO - moisture monitor. When the local Institute for Technological Research – IPT finalized its tests in March of 2010, the CE mark was awarded. The series of tests confirmed the compliance with international standards IECs and ENs, and policies for low voltage and electromagnetic compatibility.

Treotech' ISO 9001 certification was renewed. The company went through the last audit with no record of any non-compliance. Moreover, in final report, Sergio Pereira, SGS - Societe Generale de Surveillance auditor, mentioned the reliability of the Quality Management System - QMS: "It was great to come back to Treotech and see the evolution of the quality system management, which

increases its effectiveness in each audit". QMS sets standards for the three organizational areas - Operational, Technical and Industrial - and affects the daily activities of hired professional and partners of the company.

The certification awarded to Treetech since 2004 for the scope of "Development Engineering, Processing and Marketing of Electronic Devices and Smart Software dedicated to the Management, Maintenance and Monitoring of Power Transformers and High Voltage Equipment" is valid in over 30 countries. The approval is conditional on the presentation by the company, on evidences and the compliance with procedures and work instructions, consistent with the quality management process involving the entire organization. The final goal of the QMS is to ensure compliance with the client requirements.
