

## **Treetech wins third place in the national round of Prêmio CNI (CNI Prize)**

*The company was awarded the trophy during the 3rd National Meeting of Industry (Encontro Nacional da Indústria), along with other 18 companies who received awards in different categories*

After winning the state round of Prêmio CNI 2008 in the category of Innovation and Productivity, Treetech, a São Paulo company that specializes in the management of power transformers, won third place in the national contest. In a ceremony held in Brasília on October 28, Cátia Pedrosa from Treetech accepted the trophy for the Sigma4Web system, an innovative on-line monitoring system based on Web 2.0 technology.

This unique product that competed for the CNI (Confederação Nacional da Indústria – National Industry Confederation) award is a system that has intelligent electronic sensors and software that can read transformers main electrical, mechanical and chemical information and “translate it” in order to provide diagnostics and equipment prognosis. With Sigma4web, the engineering professionals who are responsible for transformers can receive, anywhere, via the Internet/Intranet, information to make decisions regarding equipment maintenance.

Because Treetech software is modular and scalable, it can apply the benefits of digitalization and on-line tracking to transformers of all sizes, even to large transformer banks.
